Flood Flooring
Hilltown
Oldcastle
Co. Meath
Ireland

To whom it may concern,

Ref: Nene Park Academy, Peterborough

Flood Flooring were appointed on the above project, to carry out the design, manufacture, supply and installation, of the pre-cast wide slab floor planks, and pre-cast Stairs.

During the pre-construction, and design stages, Flood were extremely pro-active, in ensuring their proposals met the projects requirements, and were actively involved in ensuring builders-works, voids and penetrations were all accommodated, often advising on economical solutions to some of the buildings challenges.

Flood produced a very detailed quality plan, which included all the concrete testing analysis data, reinforcement records, and casting information. Delivery sequences were planned well in advance, and despite the very strict delivery times on the project, and numerous curfew periods, Flood managed all the deliveries without any issues, around these constraints.

Another service provided by Flood, which was extremely helpful, was advice on temporary propping, and structural topping, which allowed us to minimise the time the props were installed, allow following works to progress as quickly as possible.

I would like to make particular reference to Floods design Engineer, Martin Darby, who was in constant communication during all aspects of the works, including regular visits during the installation, always updating on any changes as the works progressed. Martin was a key factor in the smooth running process, ensuring that all programme milestones were achieved.

We very much look forward to having an opportunity of working with Flood on future projects.

Yours faithfully,
For **KIER CONSTRUCTION, East Midlands**
