To whom it may concern:

Flood Flooring Limited were employed by Balfour Beatty Ireland as a sub-contractor on our Dublin Airport Stormwater Drainage and Attenuation Project completed in April 2010.

The project involved the construction of a significant reinforced concrete attenuation tank, and Flood Flooring were engaged to design, supply and install approximately 9000m<sup>2</sup> of 120mm deep precast concrete floor slabs to act as the tank roof.

From an early stage Flood Flooring worked closely with our project team and designers to develop a strong technical and economical solution to the roof design. The construction of the roof was completed by Flood Flooring to a high standard, with a quality product delivered to site, and installed in an efficient and safe manner, to a very tight programme involving a number of phased visits.

The Flood Flooring team worked proactively with our site team on an ongoing basis to ensure that operations on the site were effectively managed, contributing to the successful delivery of this project.

We would have no hesitation in working with Flood Flooring again.

Regards,

**John Keaveney**
