To whom it may concern:

CECM0696 – Chorley 6&7 UID's

Flood Flooring Limited were engaged on the Chorley UID project to design, construct and supply the pre cast concrete cover slab planks for an underground storm water storage tank 45m long by 25m wide. The design interface and communication were excellent, the pre-agreed delivery sequencing was key to the completion of a very tight programme.

From the onset Flood Flooring worked closely and proactively with the project team to ensure a strong technical, high quality and economical solution for the PCC cover slab detail.

We would have no reservations in recommending Flood Flooring for future projects.

Yours faithfully

Ian Cripps
Project Manager
