Subject Flood Pre-Cast Performance Review

Dear Sir/s

Flood precast were instructed by BAM to supply the precast Hollowcore planks & precast stairs at the UTC building in Cambridge. 5000 m2 of planks & 2 main staircases. Flood engineers overcame several design issues to allow the floor to be installed un-propped whilst keeping within the crane duties imposed by site constraints. The product was delivered on time despite a tight programme & some deliveries being rescheduled at short notice due to weather conditions. We were impressed with the quality of the products especially the soffit finish the stairs and on the Hollowcore planks which have been left exposed. The proactive attitude of Flood's design & back up team ensured that we met our clients expectations whilst keeping to the budget and we look forward to working with Flood Precast again on future projects.

Yours sincerely

Peter Maguire
Senior Site Manager
